

**Applied Physical Science - Independent Research & Teaching Project**  
**Mr. Cote'**

For this project you will research a topic of your choice, and make a presentation to your class. Your presentation must last *at least* one class period, and must include/involve:

- 1) a PowerPoint slide show (or equivalent), with appropriate graphics, video and/or sound content.
- 2) a physical demonstration or experiment done by either the presenter alone or the whole class - OR - a computer simulation or animation.
- 3) A clear attempt by the presenter to teach or demonstrate physical science concepts.

I will help you, if you would like, to make your presentation, but you will be responsible for letting me know in what way(s) I can help. For example, I might be able to help you present some of the harder science content. You are expected to be the lead presenter, and should consider me as a resource to get you through some tight spots. Remember, I want you to succeed.
